

Hey, aspiring doctor!

Let's learn some science that's important to medicine!

DNA Bracelet

DNA strands are the instructions for everything living. DNA is written with an alphabet of four letters – A, T, G and C.

A and T are besties and always hang out together. G and C are besties.

Now let's make a besties bracelet that spells out part of the human DNA sequence. The bracelet shows something you and your bestie share – curiosity!

1. Fill in the letters with their alphabet besties.
2. Then color each letter to match the color of those letters.
3. Once done, use safety scissors to cut out the bracelet
4. Glue or tape the ends together.
5. Give the bracelet to your bestie and explain the basics of DNA to them!

Doctors and scientists are studying DNA to find new cures for illnesses.

Anything is possible when you learn! **B** curious!

How many pairs did you make?
